### ***Information Disclosure Statement***

The listing of references in the specification (in this case, on page 2) is not a proper information disclosure statement. 37 CFR 1.98(b) requires a list of all patents, publications, or other information submitted for consideration by the Office, and MPEP § 609 A(1) states, "the list may not be incorporated into the specification but must be submitted in a separate paper." Therefore, unless the references have been cited by the examiner on form PTO-892, they have not been considered.

### ***Drawings***

Figure 22 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

### ***Specification***

The disclosure is objected to because of the following informalities:

On page 3, line 5 "emitter 104" should be changed to "emitter 102".

Appropriate correction is required.

The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 13 is rejected under 35 U.S.C. 102(b) as being anticipated by Ito et al. (JP 05-325777).

Regarding claim 13, Ito et al. discloses an electron emitter (Figs 1-2) comprising an emitter element (ferroelectric substrate 2, 22) made of dielectric material (see Paragraph 0014 of English Translation) a first electrode (3,23) in contact with a first surface of the emitter, and a second electrode (1, 21) in contact with a second surface of the emitter (2, 22, and English Abstract), at least the first electrode (3, 23) has a plurality of through regions and the emitter element is exposed through the through region (see drawings), the emitter element produces an electrical condenser, as being a dielectric sandwiched between two conductor and through regions of the first electrodes produce a cluster of plural electrical capacitors (each through region provide dielectric between two segments of first electrodes forming a capacitor) between the first electrode (3, 23) and the emitter element (2, 22).

***Allowable Subject Matter***

Claims 1-12 are allowed over the prior art of record.

***Examiner's Reasons for Allowance***

The following is an examiner's statement of reason for allowance:

Art Unit: 2879

Regarding claim 1, the prior art of record neither shows nor suggests an electron emitter comprising all the limitations of claim 1, particularly comprising the limitation of the first electrode has a peripheral surface around each of the through regions, the peripheral surface facing the emitter and spaced from the emitter element.

Claims 2-12 are allowed being dependent on allowed base claim 1.

***Other Prior Art Cited***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure : Chen et al. (US 6,911,768); Akiyama et al. (US 6274881); Chen et al. (US 6882100).
